KIEV AND PEREYASLAVL: SUPPLEMENTARY SETTLEMENT GAZETTEER

Supplementary Tabular Compilation of Settlement Population Histories (10000BC - 1300AD).

8 November 2026 - Aust K?tzchen | austkaeztchen@confoederatio.org

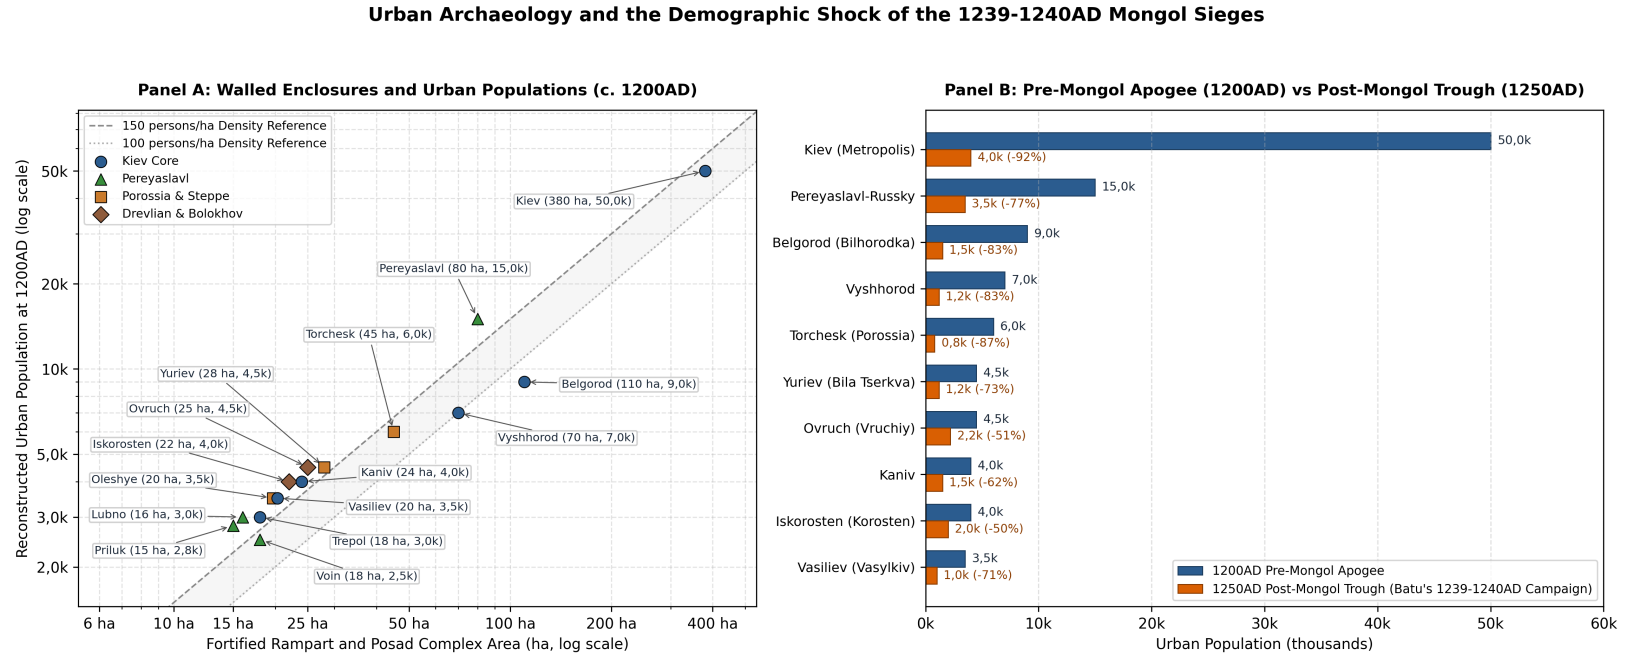

Figure 1. Walled enclosures, urban population trajectories, and post-Mongol settlement continuity across the Middle Dnieper Core (1200AD - 1300AD).

Gazetteer Overview and Methodology (10000BC - 1300AD)

This companion document details the settlement-level gazetteer (comprising 145 distinct archaeological sites and pre-Mongol and devolved-principality settlements) for the Principalities of Kiev and Pereyaslavl in the Middle Dnieper Core (10000BC - 1300AD). All benchmark series are book-ended at the Mongol Conquests (1239-1240AD) and the immediate post-conquest Golden Horde *baskak*-administered appanage period (1250AD - 1300AD).

Archaeological Planimetry and Density Multipliers

Population estimates for individual settlements in the regional gazetteer are derived from three primary archaeological and documentary methodologies spanning prehistoric planimetry, medieval fortified enclosures, and post-Mongol stratigraphic calibration.

For prehistoric and proto-urban planimetry (10000BC - 500BC), Upper Palaeolithic and Neolithic estimates (10000BC - 6000BC) are derived from excavated mammoth-bone dwelling rings at Mezhirich,

Dobranichevka, Gontsy, and Kirillovskaya (100 - 250 seasonal band and village inhabitants) and Dnieper-Donets cemetery cohorts at Nikolskoye and Vovnigi (300 - 450 inhabitants) [1][2]. Trypillia BII-CI mega-site estimates (3600BC) are derived from high-resolution geomagnetic survey house counts across the Cherkasy-Uman Ros-Southern Bug interfluve (Talianky 450 ha, ~2 700 anomalies; Maidanetske 200 ha, ~2 100 anomalies; Nebelivka 260 ha, ~1 450 anomalies; Dobrovody 250 ha), applying Diachenko and Menotti's synchronous occupation coefficient (75 - 80% simultaneous house occupancy) and 5,5 - 6,5 persons per two-storey *ploshchadka* homestead [2][3][4]. Scythian forest-steppe giant hillfort and Greek Pontic polis estimates (500BC) are derived from excavated habitation quarters at Belsk (Gelonus, 4 020 ha perimeter, 152,6 ha across the Western, Eastern, and Kuzeminsk citadels, 12,0k), Trakhtemyriv (500 ha, 4,5k), Motronyn (200 ha, 4,0k), Nemirov (110 ha, 4,0k), and the 50 ha stone-walled urban core of Olbia (15,0k) [5][6][7].

For Kievan Rus fortified enclosures (*gorodishcha*) and suburbs (*posady*, 800AD - 1240AD), following the foundational methodologies of P. P. Tolochko [8][9], A. V. Kuza [10][11], and M. A. Sahaydak [12], fortified Rus towns are partitioned into the inner citadel (*detinets*), outer walled city (*okolny gorod*), and unfortified riverine craft suburbs (*posady* and *podol*). Within densely built *detinets* and *okolny gorod* ramparts, average homestead (*usadba*) plots measure 300 - 500 m? (20 - 25 homesteads per hectare at 5,5 - 6,0 persons per household, yielding 110 - 150 persons/ha). In suburban *posad* zones and frontier cavalry towns of the Porossia and Posullya lines, lower-density courtyard layouts (600 - 900 m?) yield 70 - 110 persons/ha [13][14].

For post-Mongol stratigraphic and fiscal calibration (1240AD - 1300AD), estimates are calibrated to the 1239-1240AD destruction horizons across Pereyaslavl, Posullya, Porossia, and Kiev, John of Plano Carpini's 1246AD eyewitness count of ~200 surviving households in Kievan *Podol* (4,0k total metropolitan population in 1250AD, recovering to 8,5k by 1300AD per H. Yu. Ivakin), and the differential survival of the Drevlian Polesia and Bolokhov Land communities prior to Daniel of Galicia's 1257AD punitive campaign [15][16][17].

Prehistoric and Early Iron Age Sites (10000BC - 600AD)

Upper Palaeolithic, Neolithic, Trypillia Mega-Sites and Bronze Age Centres (10000BC - 2000BC)

Site Name	Coordinates (N, E)	Sub-Region	10000BC	6000BC	3600BC / 2000BC
Talianky	48,80°N, 30,53°E	Right-Bank Middle Dnieper	-	-	15 000 / 600
Maidanetske	48,82°N, 30,69°E	Right-Bank Middle Dnieper	-	-	10 000 / 500
