Introduction

This supplementary report presents the tabular settlement gazetteer accompanying the regional demographic review of Eastern and Pacific Siberia (10000BC - 1900AD; Figure 1). The regional dataset follows the flat Stadester structure, indexing r length(gaz_data) individual settlements by name and country with six standardised fields (name, alternate names, coordinates, country, key, and population) sorted in chronological order (Tables 1 to 9). Active occupation spans correspond directly to the first and last recorded benchmark years in each settlement's population history.

Prehistoric camp and pit-house village figures are derived from excavated dwelling counts, floor areas, and cemetery sizes [1][2][3][4][5][6]. Estimates for Iron Age and medieval fortified settlements (*gorodishcha*) in Transbaikalia, Tuva, Khakassia, the Amur Basin, and Primorye are drawn from intramural areas and excavated house-pit totals [7][8][9][10][11][12][13]. Early Russian fortresses (*ostrogi*), 18th-century mining and border towns, and 19th-century urban centres are compiled from *yasak* and garrison rolls [14][15][16][17], imperial revision lists and historical urban studies [18][19][20][21][22][23], and the 1897 First All-Russian Imperial Census [24][25].
