TOWNS AND STRONGHOLDS OF GALICIA AND VOLHYNIA

A Gazetteer of Settlements from the Dniester Canyons to the Western Bug

8 November 2026 - Aust Kätzchen | austkaeztchen@confoederatio.org

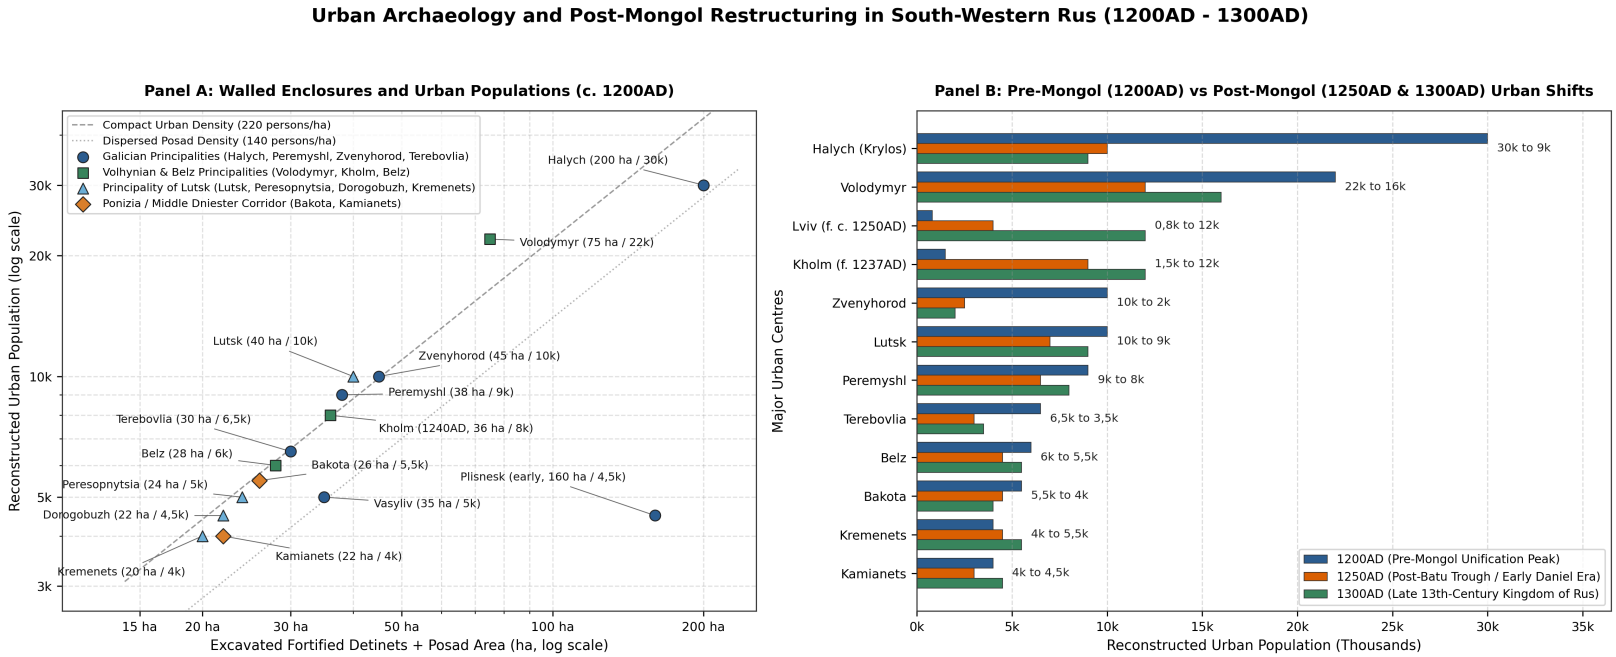

Figure 1. Excavated rampart and posad areas (in hectares) and estimated urban populations across the 176,2k km² lands of Galicia and Volhynia in 1200AD — led by Halych (200 ha, 30k), Volodymyr (75 ha, 22k), Zvenyhorod (45 ha, 10k) and Lutsk (40 ha, 10k) — alongside the post-Mongol shift in urban population to the new royal seats of Kholm (12k) and Lviv (12k) by 1300AD.

Abstract

This gazetteer compiles population estimates for 185 excavated settlements across the 176,2k km² territory of Galicia, Volhynia, Podolia, Bukovina and Transcarpathia from the Upper Palaeolithic (10000BC) to the Kingdom of Rus (1300AD) [1][2][3]. The prehistoric, Scythian and Roman-era series (Table 1) trace 36 major sites from the Dniester canyon mammoth camps of Molodova V and Korman IV (110 - 180 inhabitants in 10000BC) through the Trypillia-Cucuteni promontory settlements of Stina (3k at 3500BC), Bilche-Zolote (2,5k) and Koshylivtsi (2,5k) to the 110 ha Scythian hillfort at Nemyriv (4,5k at 500BC) and the Chernyakhov craft centres of Lepesivka (1,5k at 300AD) and Ripniv (1,4k) [4][5][6].

Across the 160 medieval towns and strongholds (Tables 2-7), urban populations reached their pre-Mongol height in 1200AD under the Rostislavichi and Romanovichi dynasties, led by Halych (30k across 200 ha), Volodymyr (22k), Zvenyhorod (10k), Lutsk (10k), Peremyshl (9k), Terebovlia (6,5k), Belz (6k) and Bakota (5,5k) [7][8][9]. Following Batu Khan's winter campaign of 1240-1241AD, which sacked Halych (falling to 10k in 1250AD), Volodymyr (12k), Zvenyhorod (2,5k) and Iziaslavl (600), urban life reorganized around the

unstormed cliff fortresses of Kremenets (4,5k in 1250AD, 5,5k in 1300AD) and Danyliv and the new royal capitals founded by King Daniel Romanovich at Kholm (9k in 1250AD, 12k in 1300AD) and Lviv (4k in 1250AD, 12k in 1300AD).

Methodology

Across the 176,2k km^2 territory of Galicia, Volhynia, Podolia, Bukovina and Transcarpathia, archaeological excavations and chronicle records document 185 principal settlements between the Upper Palaeolithic (10000BC) and the post-Mongol Kingdom of Galicia-Volhynia (1250AD - 1300AD) [1][2][10].

Population Estimation from Archaeological Evidence

Population estimates for individual towns and villages draw on excavated site areas, medieval rampart circuits and post-Mongol destruction layers.

For the prehistoric, Eneolithic and Early Iron Age periods (10000BC - 300AD), Upper Palaeolithic and Neolithic figures (10000BC - 5000BC) are based on the multilayered Dniester canyon and Tisza camps at Molodova I and V, Korman IV, Babin I, Voronovitsa, Korolevo and Kulychivka (110 - 220 inhabitants) and the Bug-Dniester and Linear Pottery (*LBK*) farming villages at Soroky, Bazkiv Ostriv and Nezvysko (280 - 420 inhabitants) [4][5]. Trypillia-Cucuteni estimates (3500BC) reflect the promontory and concentric settlements of the Upper and Middle Dniester, the Horyn flint-mining zone and the Southern Bug, including Stina (3k), Bilche-Zolote (Verteba Cave, 2,5k), Koshylivtsi (2,5k), Zalishchyky (2,2k), Nemyriv (2,2k), Bodaki (2k), Klishchiv (2k), Horodnytsia (1,8k) and Shypyntsi (1,8k) [5]. Scythian West Podolian hillfort and Chernyakhov figures (500BC - 300AD) follow the 110 ha earthen rampart fort at Nemyriv (4,5k), Severynivka (2,5k) and Hryhorivka (2,2k), together with the Roman-era Chernyakhov, Lipitsa and Wielbark craft settlements at Lepesivka (1,5k), Ripniv II (1,4k), Bovshiv (1,2k) and Cherneliv-Ruskyi (1,1k) [6][11].

For Galician-Volhynian fortified towns (*gorodishcha*) and suburbs (*posady*, 800AD - 1240AD), following the urban archaeological studies of P. P. Tolochko [12][13], A. V. Kuza [3][14], V. M. Petehyrych [8], B. P. Tomenchuk [7] and S. V. Tersky [9], towns are divided into the inner princely citadel (*detinets*), outer rampart circuit (*okolnyi grad*) and unfortified artisan quarters (*posady* and *pidhoroddia*). Compact multi-rampart capitals such as Volodymyr (75 ha, 22k), Zvenyhorod (45 ha, 10k), Lutsk (40 ha, 10k), Peremyshl (38 ha, 9k), Kholm (36 ha, 8k in 1240AD), Terebovlia (30 ha, 6,5k), Belz (28 ha, 6k), Bakota (26 ha, 5,5k), Peresopnytsia (24 ha, 5k), Dorogobuzh-on-Horyn (22 ha, 4,5k), Kamianets (22 ha, 4k) and Kremenets (20 ha, 4k) reflect mean urban densities of 200 - 290 persons/ha across combined *detinets* and core *posad* areas. Conversely, sprawling settlements enclosing meadows, monasteries and river ports, notably Halych (*Krylos*, 200 ha, 30k, 150 persons/ha), Vasyliv (35 ha, 5k, 143 persons/ha) and the early tribal forts of Plisnesk (160 ha) and Stilsko (200 ha), had lower overall densities [7][15].

For the Mongol conquest and the Kingdom of Rus (1240AD - 1300AD), estimates reflect the 1240-1241AD destruction layers excavated at Iziaslavl (falling from 2,8k in 1200AD to 600 in 1250AD) [16], Kolodyazhyn (2,2k to 450), Zvenyhorod (10k to 2,5k), Halych (30k to 10k) and Volodymyr (22k to 12k), contrasted with the unconquered cliff citadels of Kremenets (4k in 1200AD to 4,5k in 1250AD and 5,5k in 1300AD) and Danyliv, and the new royal capitals at Kholm (12k in 1300AD) and Lviv (12k in 1300AD) [17][18].
